Vector Information Sheet pAMBV4

The plasmid pAMBV4 is a yeast - E. coli shuttle vector that is used to express cDNAs as fusions to the reporter module Cub-LexA-VP16 for use in the DUALmembrane system.

Vector features

ADHp	S. cerevisiae ADH1 promoter (nt 107-1581)
Cub	Amino acids 34-76 of yeast ubiquitin (nt 1709-1844)
LexA	Amino acids 1-200 of LexA (nt 1868-2474)
VP16	Herpes simplex VP16 transactivator (nt 2491-2729)
CYC1t	S. cerevisiae CYC1 terminator (nt 2730-2983)
LEU2	S. cerevisiae LEU2 gene for auxotrophic selection in yeast (nt 3701-5929)
CEN/ARS	Origin of replication. Allows propagation of plasmids in yeast at low copy numbers (1-2 copies/cell, nt 8193-8917)
Kan	Kanamycine resistance gene (nt 6078-7110)

The complete sequence of pAMBV4 can be downloaded from http://www.dualsystems.com or can be obtained by sending a request to support@dualsystems.com.
